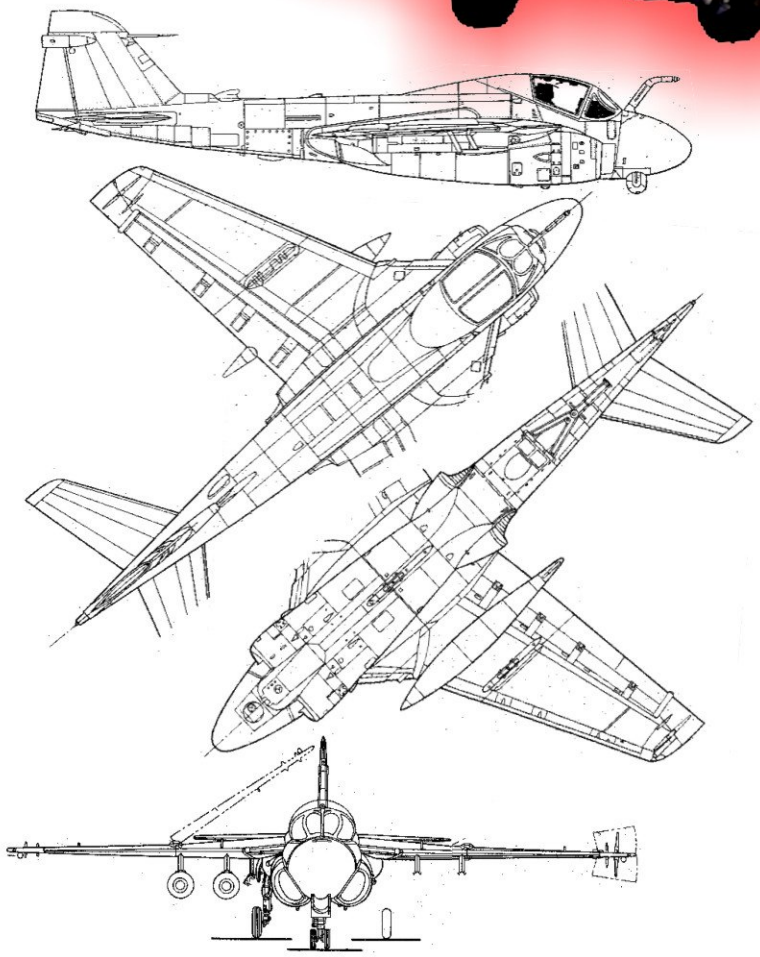
Grumman A-6E Intruder

Card model

SCALE 1:48



Crew:	Two - Side-by-side seating
Type:	Carrier-based all-weather attack
Powerplants:	Two 9,300# Pratt & Whitney J-52 P-8B turbojets
Wingspan:	**53'**
Length:	54'9"
Height:	16'2"
Max Speed (clean):	S/L 563 kts (648 mph)
Ceiling:	42,400'
Gross Weight (empty):	28,500#
Max Ordnance carriage:	18,000#
Fuel (Int):	16,000#
Fuel (Ext):	10,050#
Max Gross Wt (cat shot):	58,600#
Max Range w/Max Ordnance:	1077 nm (Hi-Lo-Hi Mission)

The A6 was developed to meet the U.S. Navy's need for an aircraft that could attack ground and sea based targets in any weather, day or night.

The A-6E was the definitive production version of the Intruder. The A-6E was externally identical to the A-6A, but featured much more advanced electronics, and successive upgrades were made throughout the years which progressively increased the capabilities of this warplane.

You'll find much more information in official web-page of INTRUDER ASSOCIATION:

http://www.intruderassociation.org/

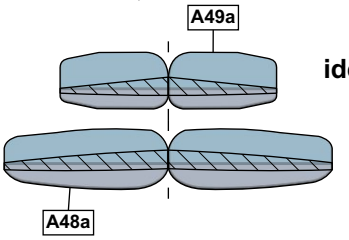
The Present model has some extensions for more advanced modelers. I have given the opportunity to build interior of the cockpit. Also the simple wheels can be replaced by laminated wheels. Some of the tabs (these marked by fine dashed lines) can be replaced by additional tabs.

- The identificators of main elements begin with letter 'A'

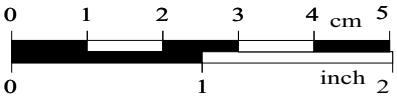
- The elements of build up wheels additional tabs have no identificators. The identificators of remaining elements begin with letter 'E'.



Before and during the build observe diagrams and visit the A-6E's gallery page:

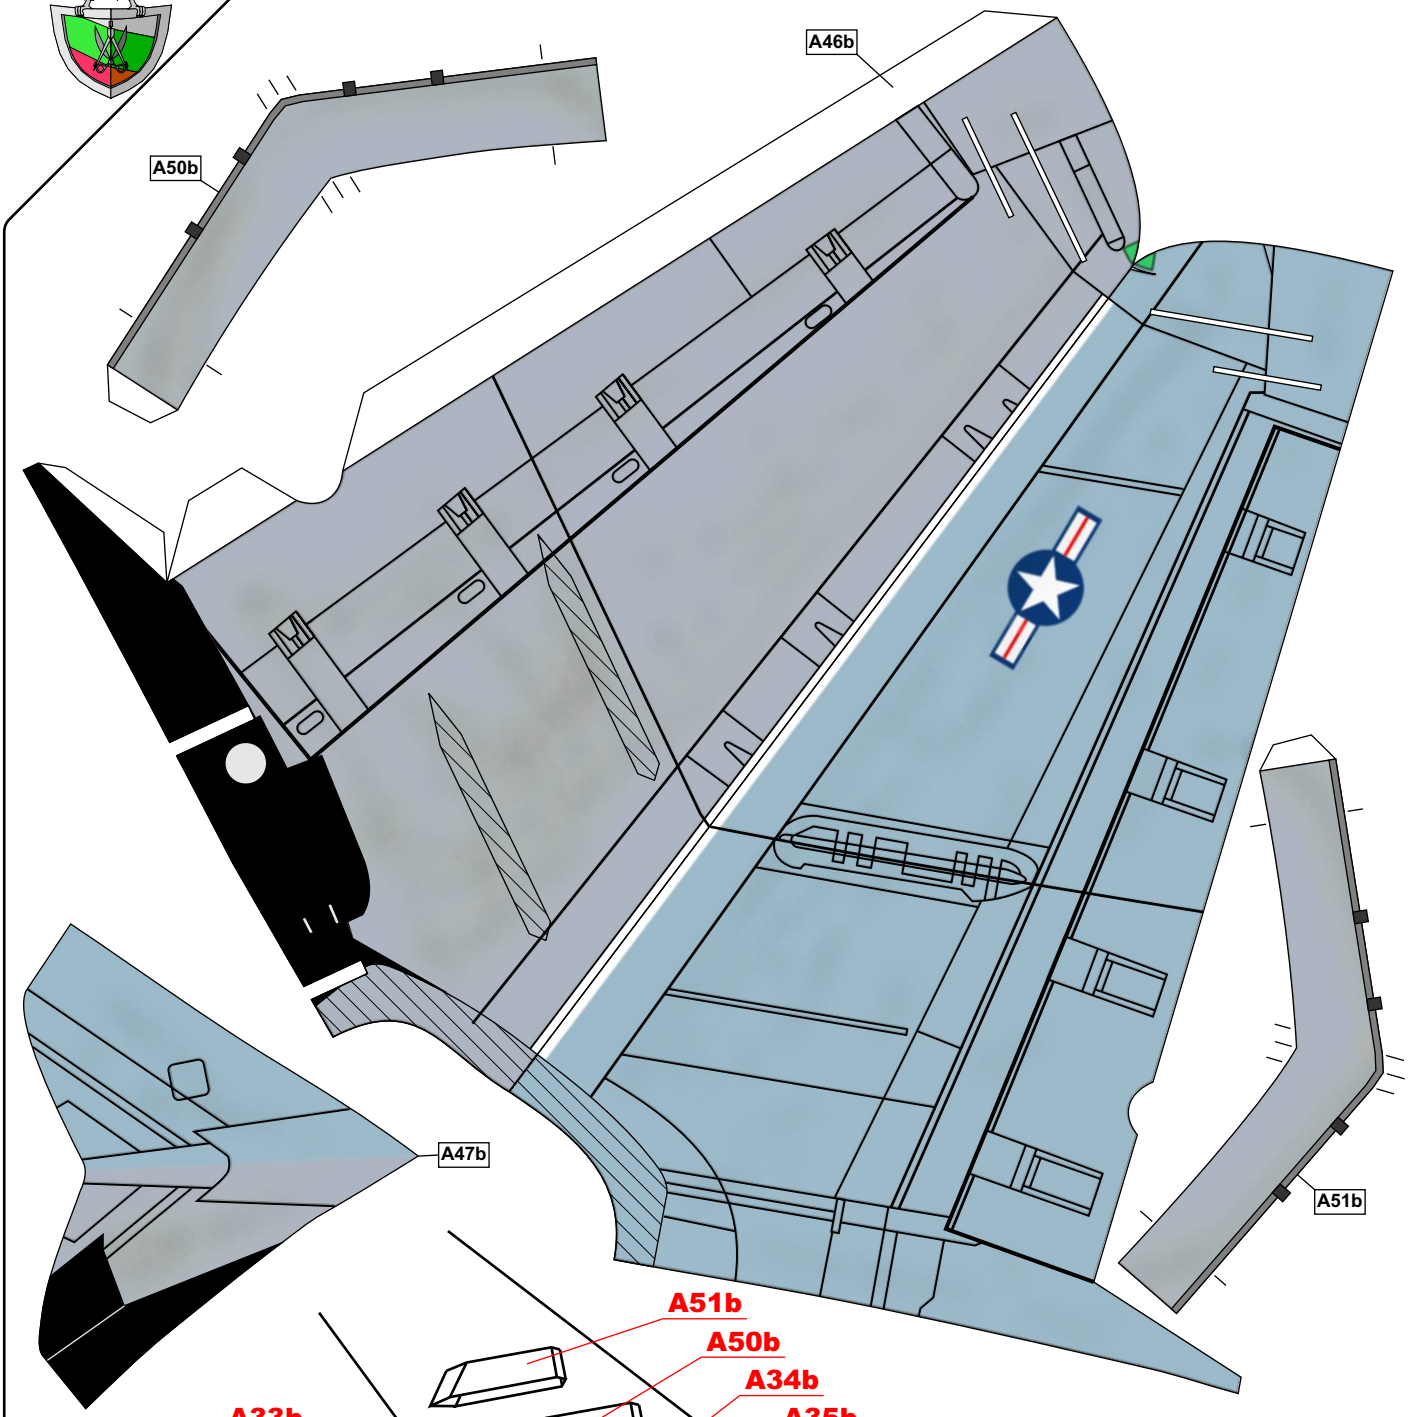
http://kancho.muncho.org/gal_id_9_1.html

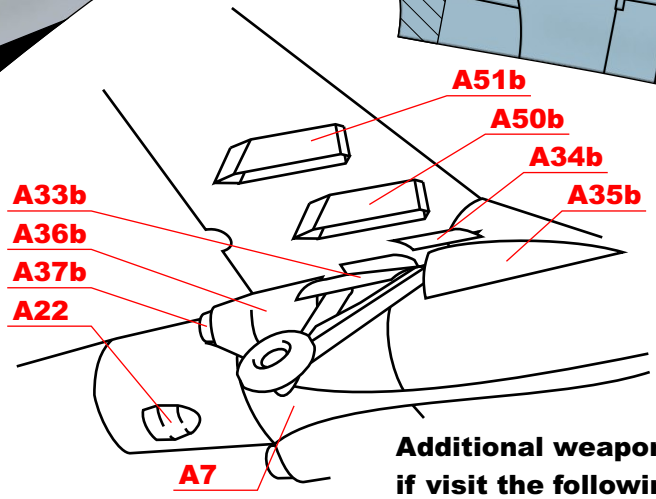
There is shown the alpha build of the model.

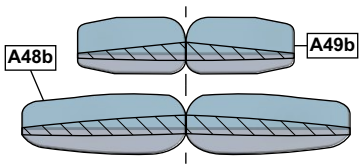


For some assembly hints and tricks visit:

http://kancho.muncho.org/tips_tricks.html

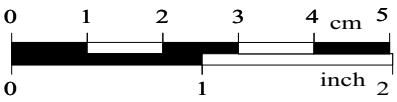


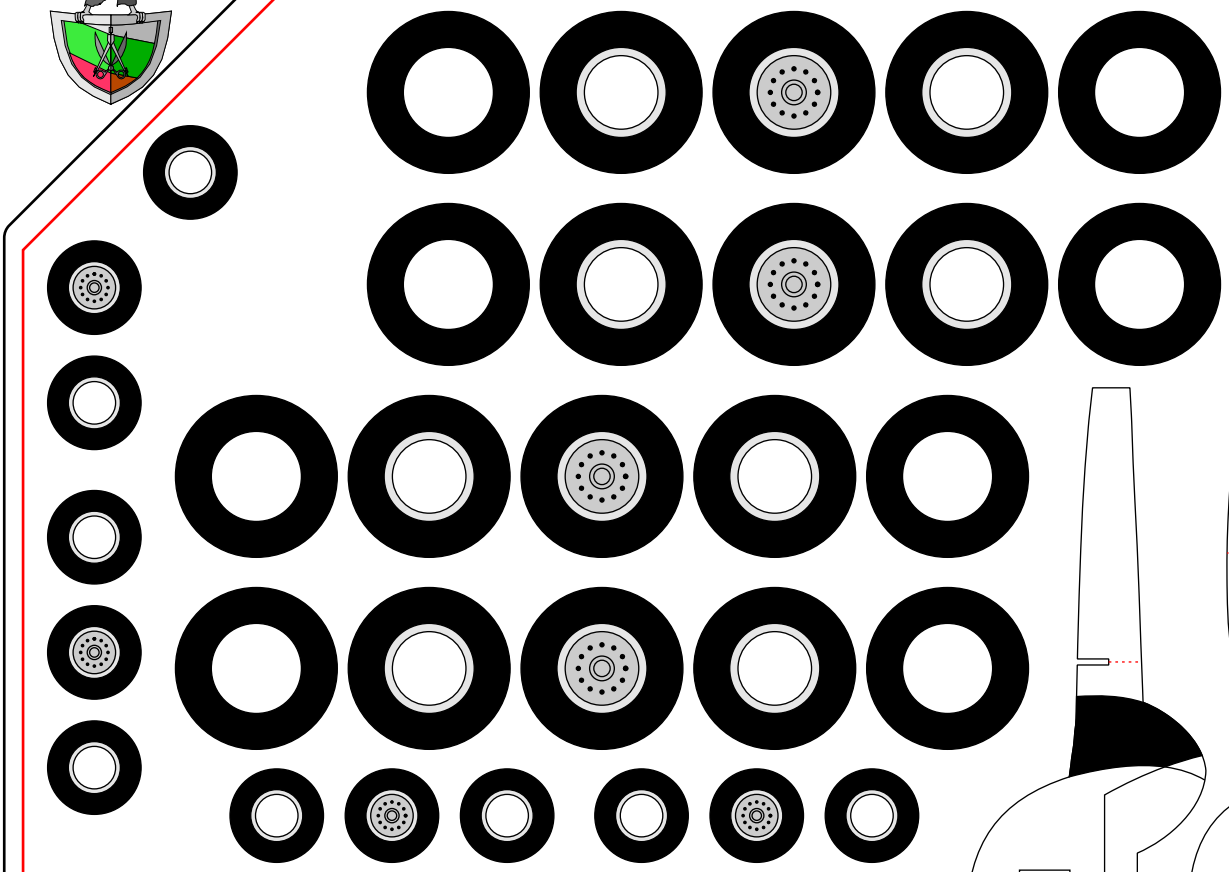




Additional weapons you'll be able to download freely if visit the following page:

http://kancho.muncho.org/w_index.html





Glue these parts on 0.5 mm card before cutting them
